

ADVANCED AI COMMAND COURSE

Prompt Engineering

ML Brei

*An introduction to generative AI
for the professional workplace.*

Advanced AI Command Course: Prompt Engineering is the professional handbook accompanying JCTM's one-day workshop introducing novice users to generative AI applications in the workplace. With a particular focus on military functional areas, it places prompt engineering in the context of professional work.

The 50-page handbook serves as a companion to the course, giving participants a resource to keep alongside their training. Its focus is the introduction of generative AI to people beginning to explore how these applications relate to their working responsibilities.

ABOUT THE AUTHOR

ML Brei is an author, teacher, publisher, and prompt-engineering consultant whose work explores language, technology, and human judgment.

After beginning in the humanities at Smith College, she entered computer science as the discipline was taking

shape, later working at Hewlett-Packard and moving into teaching, curriculum development, writing, and applied AI research. She is the founder of Meripoint Books & Writing Corner.
